EDUCATIONS

Sri Eshwar College Of Engineering
BE Computer Science

Jun 2023 - Present
CGPA : 8.0

WORK EXPERIENCES

Blockchain Developer Intern | Internship
Hooman Digital

Jun 2025 - Dec 2025

- **Audited 10+** smart contracts across DeFi protocols; identified and documented **20+** vulnerabilities.
 - **Conducted research** on cryptographic protocols, implementing **zero-knowledge proofs** to enhance data privacy in applications.
 - **Designed and implemented Solidity smart contracts** for DeFi workflows, upgrade-safe logic using Foundry-based unit and fuzz tests.
- Technologies / Skills Used : Solidity, Foundry, zero-knowledge proofs, DeFi, Smart Contract Auditing*

Software Developer Intern | Internship
RampeX Technologies

Sep 2024 - Mar 2025

- **Built and maintained full-stack web features** using **React, Node.js, and MongoDB** contributing to production-ready user flows.
 - **Designed REST APIs** and backend data models; participated in code reviews and deployment workflows.
- Technologies / Skills Used : React, Node.js, MongoDB, Express, Next.js*

PROJECTS

ZK-AfterLife (Privacy-Preserving Crypto Inheritance Protocol) | 🐙 Github

- Designed a **ZK-based inheritance protocol** enabling beneficiary **claims** without revealing identities or on-chain relationships.
 - Implemented Solidity **smart contracts** with private state commitments and time-based inactivity conditions.
 - **Built Noir circuits** for Poseidon nullifier generation, Merkle path verification, and inactivity proofs.
 - **Integrated ZK proofs** with on-chain verification logic to enforce privacy-preserving asset transfers while preventing double claims.
 - **Integrated Self Protocol** for privacy-preserving identity attestations and zkPDF for zero-knowledge document verification.
 - **Selected to build and present** at ETHGlobal New Delhi 2025, demonstrating practical ZK + Solidity protocol integration.
- Technologies / Tools Used : Solidity, Noir, ZK proofs, Rust, zkVM*

Tsender (Gas Optimized ERC-20 Bulk Transfer dApp) | 🌐 Website 🐙 Github

- Built a bulk **ERC-20 transfer dApp** using Next.js, TypeScript, **Wagmi**, and **Viem** with reliable wallet and transaction handling.
 - Implemented **gas-optimized** batch transfer logic in Huff, reducing per-recipient gas costs by **25%**.
 - Designed a clean, responsive UI with Tailwind CSS and RainbowKit, supporting approvals, gas estimation, and transaction status.
 - Developed **Foundry and Viem-based test suites** to validate batch execution, failure cases, and user interaction flows.
- Technologies / Tools Used : Next.js, TypeScript, Huff, Solidity*

AllinZ | 🌐 Website 🐙 Github

- Built a full-stack dashboard using **React, Node.js, and Express** to aggregate coding and profile data from multiple platforms.
 - Integrated external APIs (LeetCode, Codeforces, GitHub, LinkedIn) to provide a unified view of user progress and activity.
 - Added a curated **DSA/CP practice section** with categorized problems linking to LeetCode and Codeforces.
 - Built an **AI-driven roadmap generator** for personalized learning paths based on user goals.
- Technologies / Tools Used : React, Node.js, Express, Typescript*

Audit Reports and Web3 CTF Writeups | 🐙 Github

- **Authored writeups** for 20+ smart contract security challenges across Ethernaut, Damn Vulnerable DeFi.
- **Performed independent protocol analysis** in competitive audits on Code4rena, Sherlock, and Cantina.

SKILLS

Blockchain :	Ethereum, Aztec, Zero-Knowledge-Proofs, DeFi, Smart Contract Auditing, Foundry
Frameworks Libraries :	React, Next.js, Node.js, TailwindCSS, Prisma, Express
Programming Languages :	C++, Rust, Python, JavaScript, TypeScript, Solidity, Noir, Huff
Tools Platforms :	MongoDB, PostgreSQL, Axum, Docker, AWS, Git, GitHub

AWARDS & ACHIEVEMENTS

- **LeetCode** Rating: 1,516 (350+ problems solved)
- **CodeChef** Rating: 1420, 2-Star
- **Codeforces** Rating: 953
- **Selected Participant** - ETHGlobal New Delhi 2025
- **2nd Place** - 24 Hour Competitive Coding Hackathon
- Atrium Academy - UIH9 Student
